#624: I Give Up

One Friday afternoon, a guy tried to get his bike out through an exit turnstile. The bike made it halfway, and then (since bikes have no reverse gears) got stuck. So the owner padlocked it to the gate and vamoosed (presumably, through another gate that some moron hadn't blocked).

How did he get his bike in the compound to start with? Why didn't he go back out that way instead of experimenting with an obviously non-bike-worthy turnstile? Did he think that leaving the turnstile blocked all weekend might bother anyone?

So many questions.
